SUBJECT MIGRATORY BIRD, THREATENED AND ENDANGERED SPECIES, AND
WETLANDS CLEARANCE FOR MIXED WASTE CELL ASSESSMENT
BOREHOLES NORTHEAST OF NEW LANDFILL - MBM - 075 - 95

On August 22, 1995, Ecology personnel performed migratory bird, threatened and endangered species, and wetlands clearance surveys for five borehole locations adjacent to the New Landfill. These boreholes are designed for surficial geology evaluation at one of the proposed alternate sites for the Mixed Waste Cell. Drilling will be with a conventional drill rig, and is expected to be completed within a few days. No bird nests, threatened and endangered species, or wetlands were identified within the work area. Cleared travel routes were flagged, and as discussed, the rig operator is to follow the flagging route to access the borehole locations. If drilling at the sites does not commence by September 5, 1995, an additional migratory bird survey will be required.

Should you have comments or questions, please feel free to contact me at extension 3560.
